INNOVATIVE
METHODS CONSULTING

...harnessing the power of Oracle HCM Cloud Technology

You should be getting the most out of your Oracle HCM Cloud investment. Let us work with you to achieve your company's vision and support your greatest asset.

Who We Are

Innovative Methods Consulting (IMC) assists organizations by delivering the best HCM solution for your company. As "HCM cloud tech experts," our team has amassed more than one hundred years of Oracle applications experience and know-how. Long before cloud technology, we honed our design and implementation expertise on Oracle's now-obsolete E-Business Suite (EBS). As Oracle phases out support for EBS, IMC embraces the opportunity to partner with small and mid-sized businesses that are new to Oracle and ready to implement an entirely cloud-based HCM solution.

Our Approach

The Sprint 2 Success (S2S) Methodology is IMC's proprietary scalable approach to successfully meeting your requirements, while never losing sight of your department's goals and company's vision.

S2S is guided by IMC's three-step delivery process:

Where Are You Now?

- provides a detailed and accurate assessment of your current situation highlighting strengths and weaknesses
- puts a "stake in the ground" from which progress can be measured

Where Do You Want Your Business to Go?

- sets operational and financial goals to take you from transactional processing to strategic partnership

Implementing the Best Solution to Get You There!

- clear and concise recommendations for achieving goals set above

IMC Core Services

- *Implementation* - apply the S2S methodology to: set the Project Benchmark; gather your requirements; and design & deploy your solution to ensure the successful implementation of the Oracle HCM Suite
- *Health Check* - perform diagnostics on your current set-up and provide our recommendations for improvement
- *Project Rescue* - intervene and triage a troubled implementation to resolve issues and successfully complete the project
- *Managed Support* - provide ongoing application management, administration or serve as Oracle liaison (post-implementation)
